Fruit Plants Shrubs and Ornamentals

SENATOR DUNLAP
The Most Profitable Strawberry
Grown (See page 6)

Grown by

KEITH BROS. NURSERY
SAWYER, MICHIGAN

Photographed last of August (one-third natural size).

Progressive Everbearing

The Progressive Everbearing Strawberry is the best everbearing strawberry grown. It bears more berries during the summer and fall after being planted and bears sooner than any of the other everbearing varieties. It will begin to bear six weeks after it is set out in the spring and continue until the cold weather of winter freezes the berries. We have investigated and compared the fruiting of the Progressive with other leading everbearing varieties and we found it to be ahead of all of them. It is the leading everbearing variety today. It is to the June-bearing strawberries, the best berry of its kind grown.

IT WAS INTRODUCED in 1912, by Mr. Rockhill, of Iowa, as a cross between the Pan-American (an everbearing variety) and the Senator Dunlap. It couldn't have better parents. It resembles the Senator Dunlap in size, color, and shape, but has a better flavor, which is as good in August as at any other time during its bearing season. We will state that Mr. Rockhill does a very extensive work in bringing about new varieties of everbearing strawberries. The Progressive is one of the best that he has introduced.

ALL SUMMER it bears its well-flavored berries, beginning shortly after being set out in the spring and continuing until snow flies. The young plants begin to fruit as soon as they are rooted, often before, and by August the row will be well filled with ripe berries, green berries, and blossoms. The picture above is a reproduction from an actual photograph of the Progressive taken the latter part of August. Less than half as large as the Progressive plant from which the picture was taken. Plants like this will easily produce a quart of berries during the season, thus producing about nine thousand quarts per acre. On any market the berries should sell for 25 cents a quart.

THE BERRIES resemble the Senator Dunlap very much. A dark red, a rich, sweet strawberry flavor, juicy, large and well shaped. Some people have the idea that the everbearing strawberries lose their flavor during the summer, but we can state that the Progressive does not. It produces richly flavored berries all summer and fall.

FOR THE TABLE AND HOME the Progressive can't be beaten, even by the June-bearing varieties. It is just the berry for table use, making some of the finest shortcakes ever placed on a table. And for eating as a sauce they are fine. Just think of having fresh, juicy, rich strawberries for the table all summer and fall! The Progressive will supply you with berries if you give it a chance. Our "Keith's Ways to Successful Berry Culture," which we send out with every order of Progressives, will tell you how to grow the Progressive successfully.

"For preserving, this Everbearing Strawberry outclasses the spring varieties," writes one lady who has used this variety. She adds further, "Being less acid they require less sugar, and retain a rich red color. Preserves from spring varieties often fade. The Progressives retain their shape well when preserved, and the shrinkage is not as great as with other varieties. Preserves from them are less likely to get thin and watery."

We have been very careful in growing our large field of Progressive not to get other varieties mixed in. We guarantee every Progressive plant to be true to name, and will fill all orders as long as our stock lasts. Judging from the name that the Progressive has made for itself in the past two years, we expect that there will be a big demand for the plants this year, so we ask our customers to order as early as possible. Price, per 25, 50 cents; 100, \$1.75; 1,000, \$15.00.

Introduction

NOBODY ever gets very far in this world alone. Point out the person who is entirely independent, he who lives all to and by himself. No one business succeeds without the help of others. Success in business means help from the outside in the form of trade. And during the

year of 1918 the success which came to us came through the patronage of our customers, and we are exceedingly grateful to every one of you. We certainly hope that you were successful in every way with the plants that we sent you, for we are always interested in our customers' welfare. We have always thrown ourselves open for you to feel free to ask us for suggestions which may better enable you to succeed. Remember you will always find us

willing to help. This year, in the way of assisting our customers, we are supplying everyone to whom we ship plants with a copy of "Keith's Ways to Successful Berry Culture," with the hope that it may be of benefit to them in successfully growing fruit. If the suggestions found in this book are followed out, we are positive that you will have the greatest success possible. We forward you this book as soon as we receive your order so that you may have the benefits of its suggestions as to the proper location of a berry field, soil, etc., for the fruit that you are expecting to grow.

Now that the world-wide war is over, we are looking forward to the greatest success yet in the growing of small fruit. We can't recall when berries sold for the prices they did during the past year when we did not look for high prices. And now since the war is over business is going to be better than ever and the prices of small fruits are not going to drop. Strawberries are the "King of Small Fruits," and will be in better demand than ever. We certainly recommend the planting of small fruits, for this business is going to be a paying one.

Regarding our prices for this year, you will note that they are a little higher than they were last year. We just had to do it. This year, as you will understand, expenses have been away above normal. They went with the "cow over the moon," and we are not expecting them to return for some time to come. Therefore we had to get our prices up a little so as to in some way meet those sky-high expenses. We have endeavored to keep them as low as possible, leaving ourselves a legitimate profit.

Plant growing is our business and we give it special attention, in order that we may grow the best plants possible. Every plant that we send out has been grown in the best plant-growing soil possible and has been fertilized and cared for in the best manner known. Under these conditions every plant is full of strength and vitality when we dig it and is better able to grow and produce a large fruiting row for you than if it were grown under adverse conditions. Growing plants as we do, we feel sure that they will do the best possible for you and we can guarantee them in every way.

It is our desire to furnish our customers with the best plants grown, in order that they may realize the greatest returns from their investment. We have always endeavored to conduct our business on a square, upright basis, satisfying our customers and carrying out our guarantee. No order is too large or none too small for us to handle. We consider one order as important as another. We regard each order as a personal investment on the part of the sender, and therefore strive to do our part to make it a profitable one for the customer. You take no risk in ordering from us for we absolutely guarantee satisfaction in every way.

Our Guarantee

It is our intention that every variety offered and priced in this catalog will reach you in good growing condition and prove to be precisely as described. All plants shipped by us are true to name, one-year old, and carefully packed.

You take no risk in sending us your order, for we absolutely guarantee you satisfaction. We make good any order which proves unsatisfactory.

KEITH BROS. NURSERY.

This Is Our Only Salesman

In introducing our salesman, we wish to extend thanks for past patronage and to assure you prompt and careful attention to all inquiries and orders with which you may favor us. Its statements regarding varieties are actual facts. They are written through experience in growing and fruiting the plants. We offer only tried varieties and list only those which prove to be profitable.

ORDER EARLY. You are thus more certain to obtain the varieties you desire. Later in the season we may be out of the varieties that you desire. We ship orders in the rotation in which they are received. If you desire to have an order shipped on any special date, make note of same on your order and we will comply with same as nearly as possible.

HOW TO ORDER. Use order sheet and write plainly. Give exact number of plants desired and cost of same. Under no circumstances will we substitute unless privileged to do so by the purchaser. It is always well to give a second choice, especially if ordering late in the season.

REMIT by Postoffice Order, Express Money Order or Bank Draft. Postal stamps will be accepted for the fractional parts of a dollar. Don't send coins in an envelope unless you register the letter.

TERMS are cash with order. With large orders one-half the amount may be sent with order and the balance before plants are shipped.

SHIPPING. Strawberry plants are shipped by express, but cane plants, such as Blackberries and Raspberries, may be sent by freight. They often reach our customers in good condition, but we do not insure safe delivery when shipped by freight. Small orders may be sent by mail, but an additional cost is required to cover postage and safe wrapping. Look on the back of the order sheet, page 16, for Parcel Post rates.

YOUR PLANTS are dug, tied in bunches and hauled to the packing house without any chance of being exposed to the drying winds or sun. Here they are packed in damp moss in crates and shipped directly to you, thereby reaching you shortly after being dug.

PLANTS UPON ARRIVAL should be looked after at once. Don't place them away in a warm room in the package in which they were shipped. If the weather is warm they may spoil over night. Heel them in a sandy soil. Surround each bunch with the soil. They need not be watered after being heeled in unless they are quite dry from shipping. If the soil is ready, the plants may be set out at once. Remember to keep the plants cool until planted.

PREPARE THE SOIL for small fruit as if it were a garden. Plow as early as possible in the spring and keep well worked until planting. Thoroughness is an important factor in successful culture. Don't plant them on land that was in heavy sod the year before. They may be destroyed by insects. They should follow a cultivated crop, such as corn, beans, potatoes, etc.

FERTILIZE THE SOIL where possible with well-rotted barnyard or stable manure. Plow under at least ten loads per acre and topdress the soil with five loads which have been well decayed.

PLANTING should be done as early as possible in the spring. Spread the roots and pack the soil

well around them. Don't place the plants in the soil any deeper than they grew. A hole made by thrusting a spade in the soil will receive the roots in good shape. We plant all our plants in this manner. Some varieties of strawberries have imperfect blossoms, marked (Imp.) in our catalogue, and should not be planted alone. Interplant such varieties every fourth row with perfect flowered varieties, marked (Per.) This is very important. Keep it in mind when ordering.

Distance for Planting and Plants Required per Acre

Strawberries	3 ft., 8 in. x 1½ ft.	7,920 plants
Black Raspberries	7 ft. x 3½ ft.	1,777 plants
Red Raspberries	6 ft. x 3 ft.	2,420 plants
Blackberries	7 ft. x 3½ ft.	1,777 plants

CULTIVATE your plants often in order to keep down the weeds, conserve moisture, and train the runners in the row. Keep the hoe busy, too, and you will succeed.

WHERE TO ORDER. Order from Northern nurseries. If plants are dug in the South at the time the Northern season opens, they are too far advanced for shipping and planting. On the other hand, plants dug in the North at the time the season opens there, may be shipped South without encountering this difficulty.

The Northern location of our nursery renders it ideal for the growing of all small fruit plants. We are within two miles of the eastern shore of Lake Michigan. The climate is greatly moderated in the spring and fall by this large body of water. This locality is thus well suited for the growing of large, healthy, well-rooted plants. There are more small fruit plants grown here than anywhere in the United States. Let us fill your order with plants grown under these ideal conditions. We are prepared to satisfy you in every way.

Strawberries for Your Garden - Pages 8 and 9

SUPERB.

Photographed September 1st.

Everbearing Strawberries

Much has been written concerning the Everbearing Strawberry since its introduction, but still there is a doubt in the minds of some, who are not acquainted with these wonderful berries, as to their success. Every year we receive numerous questions concerning the success of these berries, but we are always ready to give our experience with them. There is no doubt but what these berries are a success and will bear paying crops of strawberries all summer and fall. We have grown them ever since they were introduced and know them to be a successful class of berries.

After growing and fruiting them for several years, we have found the Progressive and the Superb to be the two best varieties and therefore offer them for sale to our customers. Of these two varieties, we consider the Progressive to be the best for fruiting during the summer and fall, but the following spring it does not produce enough berries to be called valuable then. But during the summer and fall after it is planted it bears a large, profitable crop of fine berries. The Superb bears a fine lot of berries during the summer and fall after being set, but the following spring it will produce large yields equal to any of the June-bearing varieties. This is wherein the Progressive and the Superb differ.

The Everbearing Strawberries are a race of strawberries that bear continually from spring until winter. The blossoms keep forming on the old plants set in the spring and if these plants are not allowed to form any runners the original plant will become very large, so by fall it will often measure a foot across. This is especially true of the Superb. If runners are allowed to form the young plants set on them will bear that same season, often blossoming before the plants set roots. This is more so with the Progressive than with the Superb, thus making the Progressive more productive during the first year. You just can't keep this variety from blossoming and forming fruit. With the Superb, the plants set in the spring and those formed in June and early July are the ones that fruit during that season. The following spring the Superb fruits again, thus bearing two crops in one year.

Below we describe the Superb variety. The Progressive is pictured and described on the inside front cover. Read carefully the two descriptions.

SUPERB. This variety is one of the best known everbearing varieties and will be found listed in all catalogues. It is one of the oldest and most reliable varieties, therefore we list it. Why we do so is because it not only bears during the summer and fall after it is planted, but it bears large paying crops the following spring along with the June-bearing varieties. We have no other strawberry that will do this. In this way it produces two crops of berries a year. In order to do this fresh plants should be set every year.

The berry is large, highly flavored, and rather round. It is one of the best for table use or for preserving or canning. Many like the Superb better than the Progressive for a summer berry, and as a berry for spring shipping, marketing, etc., none of the June-bearing varieties are very far ahead of it. If you are wanting a berry for summer and fall eating and for fruit the following spring, buy the Superb. We guarantee every one of our Superb plants to be true to name. Price, 50 cents per 25; \$1.50 per 100; \$12.00 per 1,000. (300 plants or over at 1,000 rates).

General List of Strawberries

Under this heading we list but four varieties. Three are listed on this page and the other on page 9. We find these to be the best of the early varieties.

Early Varieties

BEDERWOOD (Per.)—One of the old varieties that has come to stay. It comes into bearing early in the season and continues to produce almost perfect berries to the end of the strawberry season. You will find the berries in the last picking as perfect as those in the first. This is one of the strong points of the Bederwood. We attribute this characteristic to its wonderfully strong fertilizing ability. It has a long blossoming period and is one of the best fertilizers for Haviland and other early and midseason varieties (see Haverland), and we recommend it as such. It produces more quarts per acre than any other of the early varieties. The vines are simply loaded with fruit. The berries are rather round, medium sized, light red, firm and of good flavor. It produces as many plants as the Warfield or Senator Dunlap and always makes a good fruiting row. It is one of the best of the early varieties, and should be often used as a fertilizer for imperfect varieties. Price, \$4.50 per thousand.

Bederwood.

There is more money made per acre in strawberries than any other crop a man can grow. Select early, medium, and late ripening varieties, so as to have a long picking season. Buy the best plants, set and care for them in the right way and the big profit is yours. With every order we give our customers a copy of our "Keith's Ways to Successful Berry Culture."

CHARLES I. (Per.)—Charles the First is a very productive berry that comes into bearing extra early and produces well even toward the end of the strawberry season. It is not very often that we find an early variety that bears such large crops and keeps it up nearly all season. It is a hardy plant and grows a good fruiting row under the most undesirable weather conditions. This variety is one of our best early berries. It comes into bearing about four or five days ahead of the Bederwood, which is considered one of our earliest producing strawberries. We guarantee entire satisfaction with Charles I. It is a wonderfully productive early variety. Price, \$6.00 per thousand.

EARLY OZARK (Per.)—This berry has made a great record since placed on the market. It is said to be a cross seedling of Excelsior and Aroma, and was originated in Missouri. Early Ozark is a grand extra early berry, and has become a favorite in many parts of the South, where it is the best known berry that we know of. Where it has been seen in fruit, almost everybody wants plants. The leaves are thick and leathery, with a healthy, vigorous appearance, looking as though they had been varnished. The berries average large in size, ripen early and are very firm, which means a great deal to commercial growers. We guarantee every plant to be true to name. Price, \$5.25 per thousand.

HELEN DAVIS (Per.)—This is one of the best early varieties. It isn't an old variety but one which is becoming well known with berry growers all over the country. We have placed it with the garden varieties on page 9, where you will find it pictured and described.

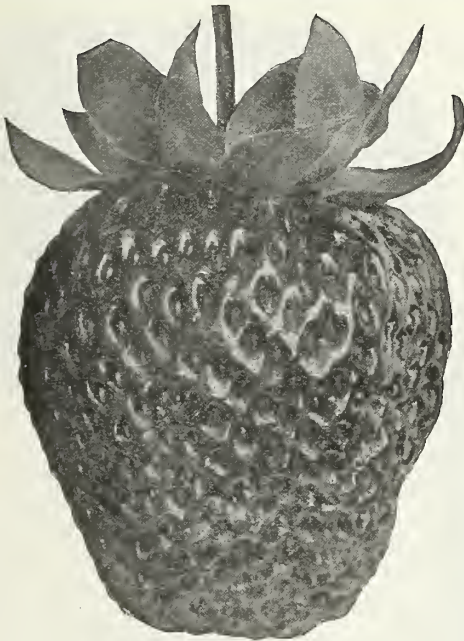

Early Ozark.

Charles I.

The King of the Reds on page 9. It's the coming best.

Bubach.

SENATOR DUNLAP (Per.)—(See illustration on front cover). This Strawberry is one of the most grown strawberries that is on the market today. There isn't a berry region in the United States but what knows the Senator Dunlap. It resembles the old Warfield in many ways, and probably this has something to do with its widespread use over the country. It has a perfect blossom and therefore can be planted by itself with a surety that it will bear large crops. It is just the strawberry for the home garden. The berry is of a dark red color, medium to large in size, with a well rounded but inclined to pointed shape. It is one of the firmest varieties and therefore will stand shipping and a great amount of handling. The berry colors up rather evenly, but when there is a part that is well shaded it doesn't become highly colored but takes on a deep pink color which makes the berry appear very beautiful. Without doubt it is one of the best all-around strawberries on the market today. Here are some of the things that make the Senator Dunlap such a great berry:

A good, firm, perfect fruit, with a striking deep red color.

An abundant producer with a medium long bearing season.

It comes into bearing in early mid-summer in time to get in on the early markets.

It is a fine berry to can for home uses. It retains its color and shape after being canned. It also retains its flavor after being cooked. It is one of the finest berries grown for home use, both for canning and for table use.

It has a perfect flower and will bear when planted alone. It is also a very good variety to plant with the imperfect varieties as a fertilizer.

It is a good shipper and a good seller. People always buy the Senator Dunlap.

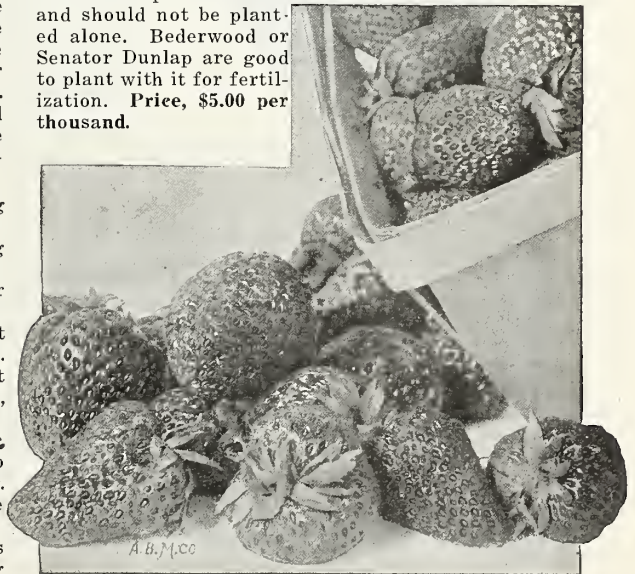

It is a wonderful plant producer. There is no question about it making a good fruiting row. Price, \$5.00 per thousand.

Medium Varieties

BUBACH (Imp.)—One of the largest berries grown. You will find it very profitable. If you are wanting a large, fancy berry, one that will make a big showing on your table or on the market, buy the Bubach. You will not be disappointed in any way with the Bubach, and it will make you large profits. Berries large, showy, even deep dark red color throughout. Stand shipping and hold their color well. Plants large and hardy. It don't make so many plants as some varieties, but enough to form a good fruiting row. Bubach is an old reliable variety of the big-berry type. It has an imperfect flower and we suggest planting it along with Gibson, Senator Dunlap, or Pocomoke for fertilization. Price, \$6.50 per thousand.

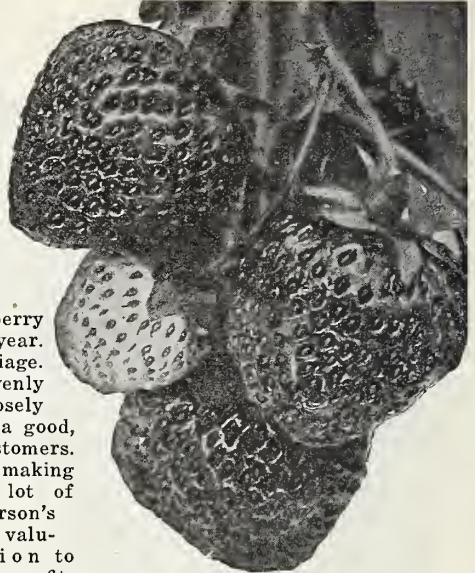

DR. BURRILL (Per.)—This variety is pictured and described on the back cover. It is one of the best new varieties that we offer and we are sure you will be pleased in every way with it. If you have ever fruited or seen the Senator Dunlap (the world's best known berry) you have an idea of the Dr. Burrill. The berry is a little more tart than the Dunlap, but as good, if not a better berry, for canning and home use. Try the Dr. Burrill if you do not want to take a chance. It will surely please you. Price, \$5.50 per thousand.

HAVERLAND (Imp.)—There is none better. One of our old varieties which has stood by us through all our years of cultivation. It is yet one of the best for early medium markets. It is an abundant plant maker, never failing to make a wide, well-filled fruiting row. The plants are healthy, long-rooted, and do well on any strawberry soil. It is one of our most heavy bearers of large, pointed, well-shaped berries, making it a very profitable market variety. They begin to ripen medium early and last well toward the end of the berry season. The end of the pointed berry is often a pink color while the remainder is a medium red, making it a very beautiful attractive market berry. It is certainly a good seller and demands the highest prices. They are easily picked and are firm enough to ship. Remember that it has an imperfect flower and should not be planted alone. Bederwood or Senator Dunlap are good to plant with it for fertilization. Price, \$5.00 per thousand.

Haverland.

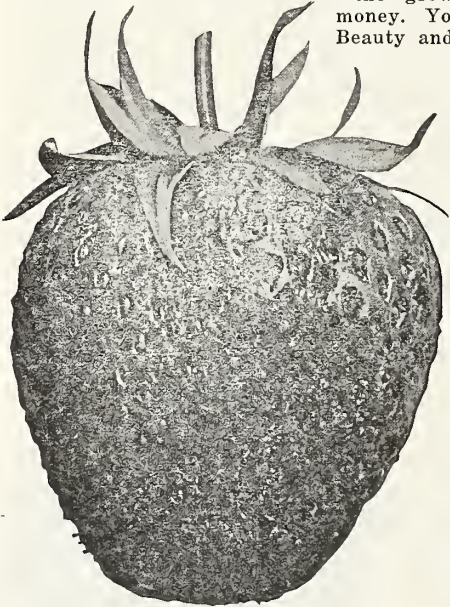

POCOMOKE (Per.)—This variety is one of the best money-makers we have, outyielding many of the varieties of its season and coming second to the famous Gibson. The berries are large, round, and hold their size and shape throughout the picking season. This is what makes it such a profitable and well-liked variety. The berries are of a deep, dark red color, firm and highly flavored. The plants are strong, hardy and good growers, making good on any soil and under all favorable conditions. It ripens evenly and is one of the best shippers yet introduced. We have no fault to find with the Pocomoke and recommend it highly to our customers. Price \$5.00 per thousand.

Pocomoke.

PARSON'S BEAUTY (Per.)—An extra good strawberry that can be depended upon to bring a paying crop every year. Plant is a strong grower with plenty of dark green foliage. Wonderfully productive. Berries are very large, evenly shaped, and have a beautiful dark, glossy finish. They closely resemble Pocomoke in every way. Parson's Beauty is a good, profitable strawberry and we recommend them to our customers. This variety is now largely planted in the East and is making the growers there a lot of money. You will like Parson's

Beauty and it will be a valuable addition to your list of profitable varieties. This variety is suitable for most any soil or condition. Order some this year, sure. Price, \$5.25 per thousand.

Uncle Jim.

GIBSON (Per.)—This famous strawberry is pictured and described on the back cover. Price, \$5.50 per thousand.

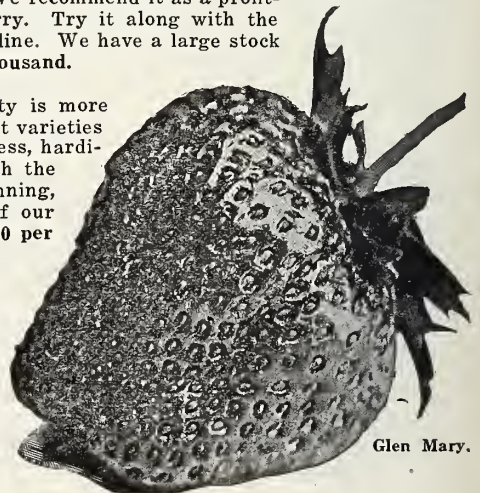

GLEN MARY (Per.)—This variety was introduced over twenty years ago. A variety that has remained on the strawberry market over twenty years certainly need not be questioned. It is a good one for the Northern strawberry regions. Very hardy, exceedingly productive; berries very attractive, firm, large, rich, juicy and highly flavored. A berry for fancy and home markets. Glen Mary has many friends, so we trust that you will order early to be sure to get the number of plants that you want. Price, \$7.00 per thousand.

UNCLE JIM (Per.)—Uncle Jim is right there with the goods. He is a big, grand "Old Uncle." Berries extra large, regular in form and of a fine quality and flavor, suitable for eating or table use. There is a great deal to be said about the Bubach, but we think your Uncle Jim has outdone it for size. The plants are hardy and do well everywhere. We recommend it as a profitable fancy berry. Try it along with the

Bubach if you want something surprising in the big berry line. We have a large stock of extra large plants of this variety. Price, \$6.50 per thousand.

WARFIELD (Per.)—This old, tried, and reliable variety is more fully described on page 8. The Warfield is one of the oldest varieties on the market. Its dark red color, fine flavor, productiveness, hardness, etc., make it a variety that will always remain with the fruit grower. It is also a fine home berry, being fine for canning, preserving, and table use. We have selected it as one of our most reliable varieties and listed it on page 8. Price, \$5.00 per thousand.

WM. BELT (Per.)—A large, attractive berry with an attractive glossy red color. It is quite pointed but of uniform shape. It ripens all over at once, a factor which some of the large berried varieties don't have. Wm. Belt is a very profitable market variety, being attractive both in color and size. Any grower wishing a variety for fancy market should not be without Wm. Belt. It does well in most places with the exception of wet soil, where it sometimes rusts. Price, \$5.25 per thousand.

Glen Mary.

CORSICAN (Per.)—The Corsican is a heavy bearer of very large berries. They are simply giants when it comes to size. These berries always attract buyers for they are so large and well colored all over with a medium red color. They have a long picking season and each plant produces a large number of berries which make them very productive. The plants are very large with heavy, dark green foliage, which makes an attractive row. Price, \$7.00 per thousand.

HERITAGE (Per.)—A large, attractive berry, well shaped, well colored, and of good flavor. A money-maker for those wanting a variety with a light, attractive foliage. It is one of the finest looking varieties we grow, making a very attractive row. The berries are an attractive red, colored evenly throughout. The plants are large, long rooted and hardy. The berries ripen a little late and continue to the end of the strawberry season. If you are wanting something worth while try the Heritage. Price, \$6.50 per thousand.

Late Varieties

BRANDYWINE (Per.)—A fine late berry, thought by many growers to be better than the Aroma. It is a more beautiful and attractive berry than the Aroma because of its dark red color and its bright yellow seeds. It has a large berry, deep red color, fine tart flavor, and productive in every way. A fine market berry. Although the berry is large it is firm, and colored to the center. The plants are healthy and do well under most conditions, but we advise planting them on rich sandy loam for best results. You will make no mistake in sending us an order for Brandywine. They have been tried for years with the best of success. Get your order in early for this variety we always sell out early, although we grow a large number. Price, \$5.00 per thousand.

AROMA (Per.)—Pictured in colors on inside of back cover.

GANDY (Per.)—Listed on page 8.

SAMPLE (Imp.)—A profitable late variety with berries of large size, a red showy color, fine quality. The Sample has a long fruiting season. This renders it a very good garden variety and a profitable home market berry. It can be classed with Bubach in size and Warfield in production. Price, \$5.50 per thousand.

Brandywine, a Worthy Late Variety.

Currants

(For prices see page 13).

(Owing to Government quarantine we are not booking orders for currants and gooseberries from places west of the Mississippi River or east of the State of Ohio).

LONDON MARKET (Red)—A hardy, strong grower; very productive; large fruit. One of our best red Currants.

VICTORIA RED (Red)—Berries large, bunches long; a strong grower and very hardy.

CHERRY (Red)—Bunches and berries very large, resembling cherries. Reliable bearer. Popular.

PERFECTION (Red)—The latest and best red Currant grown. Large, attractive, dark red berries. Hardy, vigorous bushes. A great seller.

LEE'S PROLIFIC (Black)—The leading Black Currant. A heavy bearer. Berries highly flavored. Valuable for home use.

Gooseberries

(For prices see page 13).

(Shipping limits as for Currants).

DOWNING—Berries yellow-green, large, well

flavored and first quality. The most popular variety.

HOUGHTON—The most productive and reliable bearer. Fruit medium size, smooth, pale red. Hardy, strong plants.

Grapes

(For prices see page 13).

CONCORD (Black)—Planted and known all over the country. The leading commercial black grape. Berries large, purplish-black, ripening middle of September. Bunches large, perfect, solid, well-filled. Vines very hardy and can be planted anywhere fruit is grown without danger of winter-killing.

MOORE'S EARLY (Black)—Berries black, large, with blue bloom. Highly pleasing flavor, with quality better than the Concord. Hardy and free from diseases. Ten days earlier than the Concord. A good market variety.

CAMPBELL'S EARLY (Black)—A very popular new variety. The best for quality and attractiveness. Berries large, black, highly flavored, hang for a long time on the vines after ripe. Our best black Grape.

Gandy.

Gandy The Garden's Best Late

(Per.)—This is one of the most reliable late-ripening varieties, and is a well-known and tried variety among fruit growers, therefore we place it here in this list. It is a variety that never fails to fruit and bears a good sized crop. The berries are large, firm, uniform in shape, and well flavored. They are one of the largest berries grown and always make a showy appearance when served either fresh from the garden or after being canned. The plants are large and hardy and do well in the North or South. They respond readily to good care, and when planted in rich garden soil, they are sure to do their best. There is no late bearing variety that will show the results of good soil and care as much as will the Gandy. We are sure that the Gandy will satisfy you in every way. The Gandy is certainly a dandy. Price, per 25, 25c; per 100, 85c; per 1,000, \$5.50.

With Every Home Garden Order of \$2.25 or more we send a Dorothy Perkins Rose

Our Three Early The Home

We here list three Strawberries, an early, a medium, and a late, for the home garden. They are varieties that are reliable in growth, bear well and satisfy under most every condition.

The Warfield

(Imp.)—This old tried variety has proved its worth. The wife has been glad she had this variety when it came to the home table. We have cultivated and fruited for years, never failing to satisfy. Every year many of our customers say the old Warfield is all right in every way. It's like a place it. The berries are medium to large in size, dark in color, and preserving for they always hold their shape. Also fine for market, it holds up well and its color stands up where. It always grows a good, wide picking row, well filled with berries. It stands dry summers and the freezing and heaving effects of winter. We place it between the Helen Davis and the Gandy in your garden. Price, per 25, 25c; per 100, 85c; per 1,000, \$5.50.

To succeed in growing Strawberries in your home garden follow the suggestions and instructions given in "KEITH'S WAYS TO SUCCESSFUL BERRY CULTURE." We send it with every order.

Best Strawberries

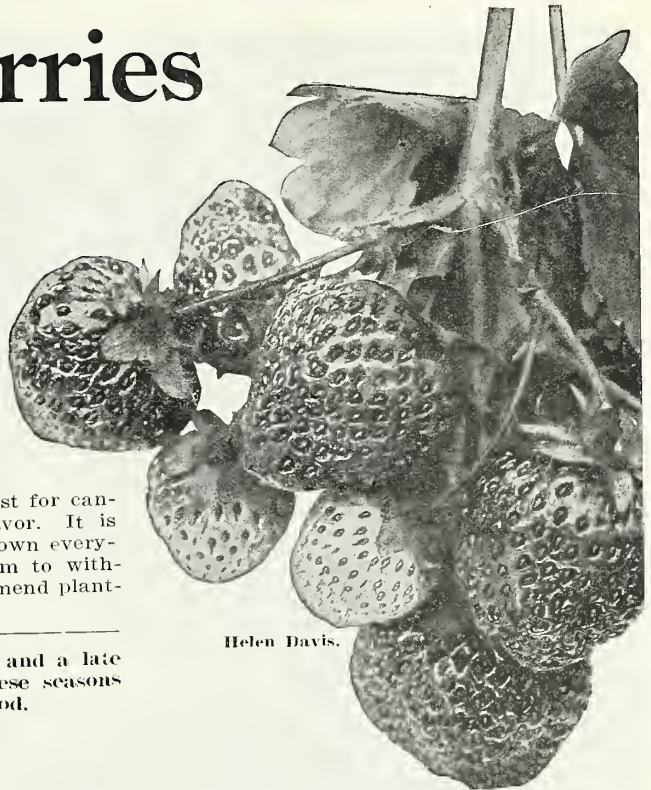

For the Home Garden

and a late variety, all of which are suitable in every way, and sure to make a good

The Best Money-maker Grown

For many years and more than one household have always found it an old "standby," and include it in their orders for they know "Old Black Horse," does well anywhere you want, firm and richly flavored. They are the best for canning and retain their rich strawberry flavor. It is a sure buyer. Its name will sell it, being well known everywhere. The plants are long-rooted, enabling them to withstand blossoms are imperfect, therefore we recommend planting 25, 25c; per 100, 80c; per 1,000, \$5.00.

Every garden should have an early, a medium and a late variety. With varieties that ripen at these seasons you have strawberries over a much longer period.

Helen Davis.

Warfield.

Helen Davis The Best of the Earlies

(Per.)—This is one of the largest early varieties on the market. It bears heavily, and is sure to produce a good crop every year. The berries are very large, smooth, well-shaped, rich dark red, which extends all the way through the berry. The flavor is fine and pleasing. We seldom find a strawberry, especially in the early varieties, with so many good qualities as has the Helen Davis. It commences to bear early and continues all through the strawberry season, producing a large crop of fine berries. The plants are strong, good growers, always making a well-filled fruiting row. They do well on any soil, but when planted in a garden they outdo any other early variety on the market. You will make no mistake in planting the Helen Davis as it always makes good. Price, per 25, 25c; per 100, 80c; per 1,000, \$5.00.

Our Three Best Strawberries

For
The Home Garden

We here list three Strawberries, an early, a medium and a late variety, all of which are suitable for the home garden. They are varieties that are reliable in every way, and sure to make a good growth, bear well and satisfy under most every condition.

The Warfield The Best Money-maker Grown

(Imp.)—This old tried variety has proved its worthiness for many years and more than one housewife has been glad she had this variety when it came to canning and serving strawberries for the home table. We have cultivated and fruited for years and have always found it an old "standby," never failing to satisfy. Every year many of our customers include it in their orders for they know the old Warfield is all right in every way. It's like the "Old Black Horse," does well anywhere you place it. The berries are medium to large in size, dark red, firm and richly flavored. They are the best for canning and preserving for they always hold their shape and color and retain their rich strawberry flavor. It is also fine for market, it holds up well and its color attracts buyers. Its name will sell it, being well known everywhere. It always grows a good, wide picking row, well filled with plants. The plants are long-rooted, enabling them to withstand dry summers and the freezing and heaving effects of winter. The blossoms are imperfect, therefore we recommend planting it between the Helen Davis and the Gandy in your garden. Price, per 25, 25c; per 100, 80c; per 1,000, \$5.00.

To succeed in growing Strawberries in your home garden follow the suggestions and instructions given in "KEITH'S WAYS TO SUCCESSFUL BERRY CULTURE." We send it with every order.

Every garden should have an early, a medium and a late ripening variety. With varieties that ripen at these seasons you may have strawberries over a much longer period.

Gandy.

Gandy The Garden's Best Late

(Per.)—This is one of the most reliable late-ripening varieties, and is a well-known and tried variety among fruit growers, therefore we place it here in this list. It is a variety that never fails to fruit and bears a good sized crop. The berries are large, firm, uniform in shape, and well flavored. They are one of the largest berries grown and always make a showy appearance when served either fresh from the garden or after being canned. The plants are large and hardy and do well in the North or South. They respond readily to good care, and when planted in rich garden soil, they are sure to do their best. There is no late bearing variety that will show the results of good soil and care as much as will the Gandy. We are sure that the Gandy will satisfy you in every way. The Gandy is certainly a dandy. Price, per 25, 25c; per 100, 85c; per 1,000, \$5.50.

Helen Davis.

Helen Davis The Best of the Earlies

(Per.)—This is one of the largest early varieties on the market. It bears heavily, and is sure to produce a good crop every year. The berries are very large, smooth, well-shaped, rich dark red, which extends all the way through the berry. The flavor is fine and pleasing. We seldom find a strawberry, especially in the early varieties, with so many good qualities as has the Helen Davis. It commences to bear early and continues all through the strawberry season, producing a large crop of fine berries. The plants are strong, good growers, always making a well-filled fruiting row. They do well on any soil, but when planted in a garden they outdo any other early variety on the market. You will make no mistake in planting the Helen Davis as it always makes good. Price, per 25, 25c; per 100, 80c; per 1,000, \$5.00.

Warfield.

With Every Home Garden Order of \$2.25 or more we send a Dorothy Perkins Rose

Early King Red Raspberries

The Most Valuable Red Raspberry Grown

This valuable red raspberry is fast coming to the front. It has already "gone over the top" as a valuable red raspberry and is now making good everywhere. We have investigated its popularity in this section of the berry "world" and we find that it is being planted by every grower as his leading and most profitable variety. They like the Early King because it is ready for market a week before the other varieties, and brings the top price. There is more money in the Early King than any other red raspberry.

THE EARLIEST OF ALL red raspberries, and sells for more than any of the other varieties. It's the early berry from which growers are making their easiest and most money now-a-days, and the Early King is just what they have been looking for for years. It is a week to ten days earlier than the other red raspberries and continues to bear at least a week longer. Of all the red raspberries grown, the Early King is the earliest and the longest bearer of them all.

NOTHING OUTDOES IT in yield. Its berries are firm, good size, well colored, easily picked, and good shippers. There is more money made per acre in fruiting Early King than any other variety of red raspberry.

CANES ARE HARDY, withstanding the cold of the Northern winters. They are strong, upright growers, forming a wide, well-filled picking row soon after being planted. We have never known the canes to winter-kill since its introduction. Even that cold January of 1918 did not kill them, and during the past season (1918) the Early King bore large paying crops. One of the large growers in this vicinity stated that he made more off his Early King this year than any other variety.

IN SUMMING UP we will state that the Early King is the most profitable red raspberry grown.

A week to ten days earlier than any other variety, ten days longer bearing season than any other variety. Exceedingly productive, out-yielding any other variety. Berries large, firm, well colored, well flavored, canes hardy, strong, upright. The best and most profitable red raspberry grown.

Price, per 25, 50 cents; 100, \$1.50; 1,000, \$12.00. (300 or more plants at 1,000 rates.)

Early King is the most profitable purchase you can make. It will make you more money than any other red raspberry. We guarantee every plant to be true to name and will ship you the best plants grown. We have thousands of plants for our customers, but we ask you to get your order in early.

"KEITH'S WAYS TO SUCCESSFUL BERRY CULTURE" tells how to grow Red Raspberries.

Red Raspberries

CUTHBERT—A remarkably strong, hardy variety. Stands the Northern winds and Southern summers equal to any. Berry very large, sometimes measuring three inches around; conical, rich crimson, very handsome, and so firm they can be shipped hundreds of miles by rail in good condition. Flavor is rich, sweet and luscious. The leading market variety for main crop. Without a doubt the most popular red raspberry known to the fruit grower of today, and it certainly leads all others in points of productiveness, quality and appearance, and by long odds in acreage grown. Price, \$12.00 per thousand.

St. Regis Everbearing

This variety of red raspberry is something new in the red raspberry line. It is a red raspberry all right, but an everbearer, beginning to ripen its fruit right after the strawberry season in the spring and continues until late fall. Not only does it bear during the summer and fall months, but it bears in the spring at the same time that other varieties of red raspberries are fruiting. This spring crop is as large as any produced by the common red raspberries, but it comes much earlier. The berries that are produced during the summer and fall are formed on the younger growths of that season, mostly at the ends of the young shoots. They are very highly flavored and just fine for table use during the summer and fall months. If you want a red raspberry that will furnish you with berries all summer and fall, and then produce a large, profitable crop every spring, you should not be without the St. Regis Everbearing Red Raspberry. The berries are rich, highly flavored, firm, well colored. The canes are hardy, strong, and upright, withstanding the cold Northern winters. We have the genuine Everbearing St. Regis plants and guarantee them in every way. Price, per dozen, 50c; 25, 75c; 100, \$2.00; 1,000, \$17.00. (300 or more plants at 1,000 rates).

Cuthbert Red Raspberry ($\frac{3}{4}$ natural size).

St. Regis Everbearing Red Raspberry. ($\frac{3}{4}$ natural size).

Black Raspberries

CUMBERLAND—The "Business Black Cap." Biggest black raspberry grown. This black raspberry is offered with the full assurance that it is the most profitable and desirable market variety yet known, because of its immense size, firmness and great productiveness. The fruit is simply great, far surpassing any other variety. The berries are nearly an inch in diameter and are of such handsome appearance that their fruit sold for 15 cents per quart when other varieties were selling for 10 cents per quart. In spite of their unusual size, the fruit is possessed of great firmness and is thus well adapted for standing long shipment. The bush is exceedingly healthy and strong, throwing up stout, stocky canes, well adapted for supporting their loads of large fruit.

Cumberland is very hardy, having withstood a temperature of 16 degrees below zero without injury. Extra productive, being the heaviest bearing variety now in cultivation. Fruit is jet black and of extra fine quality. Ripens before Gregg. Buy Cumberland for profit.

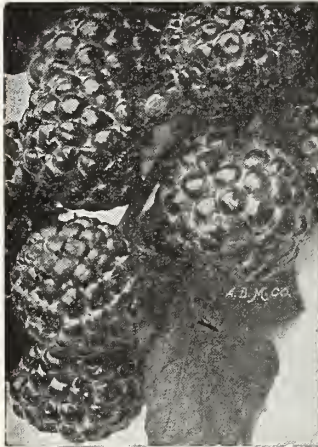

This is the standard black raspberry and the sale of Cumberland exceeds all others. Strong heavy rooted plants, grown on our new ground. Price, \$12.00 per thousand.

PLUM FARMER—A wonderful new black raspberry that has already become one of the leading and most profitable varieties.

We guarantee the Plum Farmer to bring you a paying crop of extra fine fruit. The plants are very healthy, have a silvery bluish appearance when ripened in the fall, and succeed where others fail. The fruit is grayish-black, very firm, a good shipper, attractive, of the very highest flavor, and is adapted for evaporating, as well as for fresh market or home use.

Plum Farmer is a large berry and strictly first-class in every way. You have no doubt heard or read of the wonderful crops in this variety in many places.

Our Plum Farmer plants are grown on our new ground, and, of course, are extra large, with heavy roots. Price \$12.00 per thousand.

Kansas.

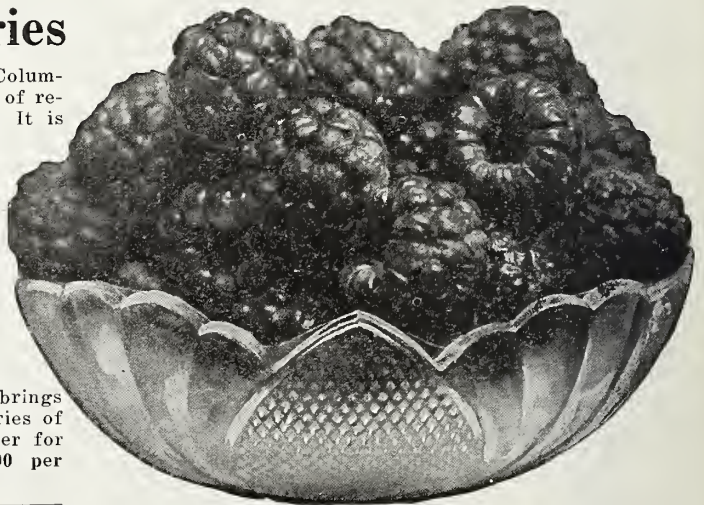

Cumberland.

KANSAS—This variety is now a general favorite with fruit growers all over the United States. It is one of our earliest black caps; jet black, firm, handsome and of the best quality; bush a strong grower, holds its foliage until frost; stands drouth and cold. We find it a very excellent variety. It is about as large as Gregg, and very productive. Strong, healthy canes, makes plenty of strong tips. Price, \$12.00 per thousand.

Purple Raspberries

COLUMBIAN (Purple Cap)—The Columbian is a variety of the Shaffer type, of remarkable vigor and productiveness. It is very hardy and propagates from tips. Fruit very large, often an inch in diameter, shape somewhat conical; color dark red, bordering on purple; adheres firmly to the stem; seeds small and deeply imbedded in a rich, juicy pulp with a distinct flavor of its own, making it a delicious table berry, and the best berry grown for canning and pies. We guarantee entire satisfaction with Columbian Purple. The Columbian presents a fine appearance in the case and always brings the top price on the market for berries of its class. They will please you either for home use or market. Price, \$18.00 per thousand.

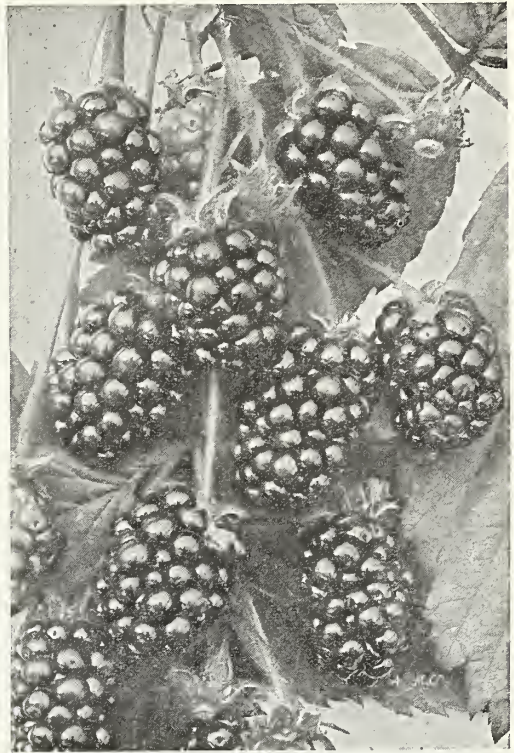

Columbian ($\frac{3}{4}$ actual size).

"Keith's Ways to Successful Berry Culture" tells how to grow Raspberries. Sent with every order.

Blackberries

ELDORADO—We place this variety ahead of all others without a moment's hesitation. It is the greatest blackberry in general cultivation today. Eldorado is as hardy as the Snyder, twice as large and of better quality. When you get one like that you have a berry that cannot be beaten. Eldorado has never been known to winter-kill, even in Northern Michigan and Wisconsin. For home and market use, we recommend Eldorado above all others. We consider it the best blackberry ever fruited in every way, and have grown them all. Our Eldorado field is a sight to see in blossoming and fruiting time. The fruit is of good size, firm, and of the very highest quality. Very profitable, as it needs no protection in winter. Our plants this year are the finest we have ever raised, and our stock is the largest, but we expect to be sold out of this variety before the shipping season is over, and do not be one of those to be disappointed this season on the famous blackberry. Order early so you will be sure to have your order filled. Price, \$15.00 per thousand.

Eldorado Blackberry.

All varieties listed below are tried and tested, and have proved themselves to be worthy. We do not list many varieties, but those we do are profitable in every way.

Before ordering, read carefully instructions on page 2.

Ornamental Shrubs and Flowers for Your Home

A few ornamental shrubs and flowers properly placed about your house and yard will increase the appearance and value of your home more than you can realize. A small house can be made as attractive as a large one, it doesn't matter about size. If you want to increase the value of your property, make it more attractive by properly using a few dollars' worth of shrubs and flowers as well as a few dollars' worth of paint. There is as much in using the proper flowering shrubs about your house and other buildings as there is in the proper selection of paint. You often wonder as you travel through the country why one home is so much more attractive than another, and then when you pass into a city you always think "how nice and fine the homes appear there." Your home can be made as attractive as any of these if you care to spend a little time in setting out the shrubs. After being properly set, shrubs need little care, they simply grow and make your home more attractive and beautiful.

We feel as though we could assist you in selecting and arranging flowering shrubs about your home, as we have had much experience along these lines, one of our members having spent four years of study and six years of teaching Landscape Gardening. Send us the dimensions of your house, the direction it faces, its distance from the highway, fences, barn and other buildings, and we will give you some idea of how much it will cost you to make it very attractive. On the average, about \$10.00 worth of shrubs will be sufficient to make it appear as attractive and beautiful as any city home. Write us your wants and we will do all we can for you. You will always find us ready to assist you in making your home more attractive and beautiful by using ornamental flowering shrubs. On this page you will find listed only a few of the ornamental plants we grow. If you are interested in any not herein listed, write us.

What a few Shrubs can do for the appearance of the corners about the porch. Hydrangeas, Spireas, Barberry, Deutzias, and Roses used. Wouldn't these walls and corners appear bare and ugly without these shrubs?

PINK DOUBLE FLOWERING ALMOND. An old well known shrub, but a most useful one, blooming in May with pink, double, rose-like flowers matted up and down on the stem. Naturally grows in the form of a shrub, but can be pruned to a tree from three to four feet. 40 cents each.

JAPANESE BARBERRY (*B. Thubergii*). A dark-green foliage bush, with red berries that hang on all winter. Leaves small but very dense, red in fall. A hardy, rapid grower. A very attractive and much used shrub. Planted extensively for hedges and along walks. 30 cents each.

DOUBLE WHITE DEUTZIA (*D. crenata*). Double white, pink-tinged flowers in the axil of the leaves and up and down on the shoots. Profuse bloomer in early June. A strong and vigorous grower. 40 cents each.

FORTUNE'S GOLDEN BELL (*F. Fortunei*). One of the earliest blooming shrubs, golden-yellow bell-shaped flowers appearing in April. Very attractive in early spring, a solid mass of golden-yellow flowers. Erect, spreading and vigorous. One of the best Golden Bells. 35 cents each.

LARGE-FLOWERED HYDRANGEA (*H. paniculata grandiflora*). One of the best known shrubs with large, conical, white flower clusters which turn to a brownish-red in the fall. Can be kept in this color all winter if cut and taken indoors before cold weather sets in. Flower clusters often 10 to 12 inches long, conical shape, drooping. Blooms in August and September when few shrubs are in bloom. One of the most useful and attractive shrubs grown. 35 cents each.

NINE BARK (*S. opulifolia*). A rank growing shrub with attractive light golden foliage. Spreading, round-topped, with white flowers which turn into reddish-brown berries that remain in clusters and hang on until frost. One of the most reliable shrubs. 30 cents each.

VAN HOUTTE'S SPIREA (*S. Van Houttei*). One of the most used of the Spireas. Masses of white flowers appear all over the drooping twigs and branches, giving the shrub the appearance of a bank of snow. Its graceful, drooping habit of growth makes it a very good shrub for planting alone upon the lawn or in the border or mass planting. Highly recommended. 40 cents each.

AMERICAN BEAUTY ROSE. Flowers deep pink, attractive, fragrant; a very heavy bloomer, hardy. Used greatly on porches and pergolas. 50 cents each.

CRIMSON RAMBLER ROSE. A hardy, vigorous grower, with masses of bright crimson-red, double flowers. One of the most used Ramblers. Shoots grow 6 to 8 feet in one season. 40 cents each.

PINK DOROTHY PERKINS ROSE. As vigorous and rapid a grower as the Crimson Rambler. Pink flowers in large, beautiful clusters. Makes a striking contrast when planted with Crimson Rambler. 40 cents each.

BILLARD'S SPIREA (*S. Billardi*). Grows rather open, upright, and has a very graceful appearance with its spikes of rose-colored flowers that appear at the ends of the shoots. Blossoms in July and August, when most flowers are not in bloom. 40 cents each.

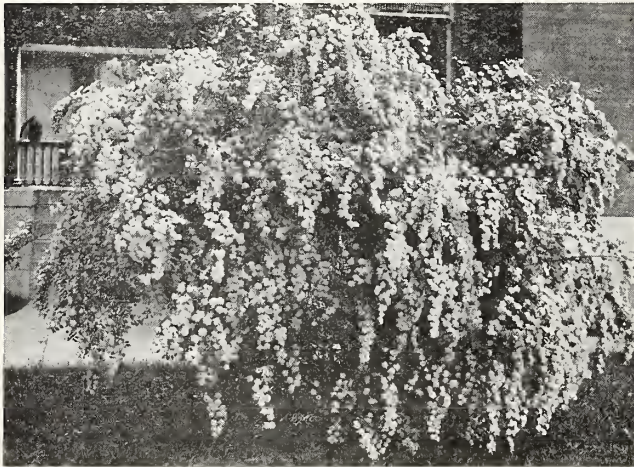

What a hedge near the walk and a few shrubs near the house and porch can do for the appearance of a home.

Shipping Plants by Parcel Post

We find that our customers are much better satisfied in having the plants shipped by parcel post instead of Express when the total shipment is less than 1,000 plants. And it is our opinion that they find the parcel post cheaper in shipping in the first, second, and third zones. Last year our parcel post shipments often reached customers sooner than those sent by express.

The parcel post weight limit for the first, second and third zones is 70 pounds. Fifty-pound packages may be sent into all zones. Inquire of your Postmaster or mail carrier what zone you are in when receiving parcel post shipments from Sawyer, Michigan, our shipping point. Then by referring to the table below, you can readily see the amount of postage to include in having your order sent you by parcel post. This amount of postage includes the packing of your plants in moss, wrapping, etc. All of our strawberry plants when shipped by parcel post are packed and wrapped in moss.

Spirea Van Houttei.

Spirea Van Houttei

The Spirea Van Houttei, often called the Bridal Wreath Spirea, is one of the most used shrubs in landscape gardening. It may be planted alone, in a hedge, or in a mass planting near the house or at the sides of the lawn. It blossoms in the Spring, forming long, weeping wreaths of clustered white flowers as shown in the picture. An ornament to the lawn at any time, but particularly so during the blooming season. It is a very hardy shrub and can be grown anywhere.

Price, Each, 40c

Dorothy Perkins Rose

These roses may be had in three different colors, pink, white, and red. They are very heavy bloomers, equaling the Crimson Rambler in every way. In fact, the White Dorothy Perkins is often listed as a white rambler. They are very thrifty and fast growers, growing vines or canes six to ten feet in one summer. The leaves are a dark reflecting green, not so subject to mildew as other climbing roses. The flowers form in great, attractive clusters, and are very fragrant. The picture at the right shows only a small cluster of the flowers. In the first picture on page 14, the Dorothy Perkins rose may be seen trained to a trellis at the corner of the house. They are much used as climbing roses for the porches, over doorways, and near stone or stucco garages. We have the pink, the white, or the red.

Price, Each, 40c

Dorothy Perkins Roses.

Aroma.

want more after once getting a taste.

The berry is a rich red color, large, well shaped and firm, making it a berry which ships, sells, and goes well on any market. Its delicious flavor makes it a fine berry for home use. Many of the berries measure from four to five inches around, being solid, firm and well colored throughout. They are seldom misshapen, due to the fact that the blossoms have an abundance of pollen, making this variety a good "fertilizer" for other late bearing varieties, especially the Sample.

It has a long picking season, the berries beginning to ripen about the middle of the season and continue until late. This makes it a very productive berry, yielding a possible crop of ten to twelve thousand quarts per acre.

The plants are strong, healthy growers, making a wide picking row. The leaves are not subject to the strawberry diseases attracting many varieties, and the plants have no faults or weaknesses of any kind as we observe them.

Place your orders early for "The World's Best Known Late Strawberry." The Aroma will surely please you in every way. Price, \$5.75 per thousand.

Aroma

The World's Best Known Late Strawberry

It is grown as a standard late variety in every region where strawberries are grown, and it always will be. "The newer varieties are all right," writes one large grower, "but the Aroma is good enough for us." If you are wanting a late variety of strawberry which is grown and well known all over the United States, select the Aroma. We sell more Aroma plants than any other late variety. It is to the late varieties as the Senator Dunlap is to the varieties that ripen in midseason, the most profitable late strawberry grown. The large growers all over the United States have the Aroma as one of their leading, reliable late varieties of Strawberries.

We never fail to sell all the Aroma plants we can grow. This year we have thousands of large, well-rooted plants and expect to sell every one of them. Every one of our customers who have bought the Aroma have found it to be satisfactory in every way. It surely will please you. We have plants which we guarantee true to name, so if you are wanting the true Aroma we can supply you with the plants.

The large, well colored berries always sell well on any market. There is no other strawberry that has the pleasing flavor that this variety has. It gets its name from the delicious, aromatic flavor that is peculiar to its berries. One of those flavors which causes you to

Dr. Burrill

A Good Reliable Cropper and Seller

This is a rather new variety, the result of a cross between the Senator Dunlap and the Crescent. Better varieties could not have been chosen for the parents of this valuable new variety, the Senator Dunlap being one of the leading varieties today and the Crescent one of those old, hardy, productive, and valuable varieties that our fathers used to fruit. It resembles the Senator Dunlap very much and is thought by some growers to be more hardy and productive. The Dr. Burrill is a good shipper, fine for canning and preserving, and equals any for table use. A shortcake made from its large, juicy, well flavored berries is hard to beat. The berries are a dark, attractive, red color, pointed, well shaped, solid and firm, making it a good berry for shipping to far-away markets. When canned or preserved they remain whole, a quality that housewives like.

The blossoms are perfect (Per.), with plenty of pollen. Try Dr. Burrill, it will surely please you.

Price, \$5.50 per thousand.

Dr. Burrill.

MAY 31 1918

The Famous Gibson

No Bigger, Better Berry Grown

Gibson.

Again we give the famous Gibson this prominent place in our year-book, for it still holds a very high place in our estimation as a wonderful strawberry. There is little doubt but that the famous Gibson is fast becoming the best known and most profitable strawberry on the market. Wherever grown it proves itself to be worthy and the grower never gives it up. There isn't a berry grower in this section of the country who is not a lover of the Gibson and fruits it as one of his most paying varieties. A

variety that has all the good qualities that the famous Gibson has will soon become known in the berry world, and the famous Gibson is of that sort, for we sell more and more of the Gibson plants every year. This shows that it is "making good" everywhere. Last year we sold out of this variety long before the season ended and we could not obtain plants anywhere to supply our customers. This year we have thousands of large, well-rooted plants, and we hope to be able to fill every order, but ask you to get your order in early.

This variety is a good all-around berry. It is suited for the home as well as for the market. It is wonderfully productive, out-bearing other varieties of its season with its large, attractive, well-flavored berries, which hold up well in size throughout the picking season. Even in the last pickings the berries are of good size and color and sell well on the market. For the table, the last pickings are the best, being more highly flavored, juicier, and sweeter than those of the first of the season.

AS A BERRY FOR SHIPPING it is of the best, holding its color, shape, and firmness long enough to reach any market. It withstands rough handling, which makes it a fine market berry. Ask those who have fruited the famous Gibson and they will tell you its value as a market berry. The famous Gibson always "appears well in public places."

A LONG CONTINUED BEARER, commencing to ripen with the Senator Dunlap, Warfield, and other midseason varieties, and continuing late into the strawberry season. The heaviest pickings commence about a week or ten days after the first berries ripen and continue for a week to ten days, after which the yields lessen, making a long productive bearing season.

THE SIZE OF THE BERRY is large, many of them measuring four to five inches around. One of our largest strawberries, and it holds its size well to the end of the season. Some idea of its size may be had from the colored illustration given on this page. This is a colored print reproduced from an actual photograph of the famous Gibson. You will find no bigger, better bearing berry. The color of the berry can't be beaten. A dark, rich, attractive red, the color extending all the way through the berry.

FOR TABLE USE or for canning the famous Gibson can't be outdone. It is juicy, and with its rich strawberry flavor, we find it to be one of our best berries for the table. And when it comes to canning or preserving, the Gibson is just what the housewife wants. It remains whole when cooked and does not lose its rich red color. We have no better berry for home use or commercial canning.

FOR A HOME GARDEN strawberry you can find no better. Why? Because it bears heavily; fruits over a long period; produces large, perfect, well-shaped berries, which are firm, richly flavored, juicy, and just fine for canning or preserving. The plants are healthy and respond readily to good care, making a large, wide fruiting row. The famous Gibson is a very reliable garden strawberry.

FOR MAKING MONEY in growing strawberries grow the famous Gibson. You will never be disappointed. There isn't a grower in this section of the country who isn't fruiting the Gibson. They find it the most profitable strawberry on the market. It is certainly a money maker, and we guarantee it in every way. You will never give it up if you fruit it once.

We have a fine lot of Gibson plants this year and guarantee them to be true to name. If you want to get a start with our Gibson plants we have them for you. We hope to have enough plants for all our customers, but we advise you to place your order early. Price, \$5.50 per thousand.

In order to aid our customers in growing large yields from our plants, we send with your order a copy of "Keith's Ways to Successful Berry Culture." As soon as your order reaches us we send you this booklet so you may receive all its benefits regarding handling plants, soil selection and preparation, planting, cultivation, etc. If you follow its suggestions you will succeed.
